**541690 - Other Technical Consulting (non-IT):** technical consulting or advisory, energy consulting (power generation), feasibility studies, process improvement, strategic planning, risk assessments, and high-level strategy or analysis.

### Recent Work

(not under GSA Schedule)

The nature of our business is to confidentially assist stakeholders to solve rare issues affecting the core of their business, therefore project specific information is never made public therefore we can not share the customer name or project specifics. General details are below and references can be given upon request.

#### Project #1: Program Management

As the program manager for this project we oversaw and developed an integrated management system for an independent power producer overseas. The integrated system encompassed their Health, Safety, Security, and Environmental (HSSE) program, Business Continuity program, and Enterprise Risk program. Integrating the HSSE, BCM, and ERM programs reduced redundancy, streamlined policy and procedures, ensured strategic goals and objectives were aligned, and reduced conflicts between the three management programs within the overarching system.

#### Project #2: Project Management

Productive Outcomes provided advisory services for a capital project underway in the United States in the energy sector. We provided support in the areas of capital project set-up, preparing the operating plan, pre-qualifying potential O&M contractors, defining the role of the owner, drafting the O&M contract, and developing technical and commercial criteria for the RFP process.
